

Yeasts are Eukaryotic single celled micro organisms classified as members of the fungus kingdom with a single celled growth habit ,Yeasts can be contracted with molds, which grow hyphae.

The Yeast species saccharomyces cerevisiae convents carbohydrates to carbon dioxide and alcohols in a process know as fermentation. Yeasts are chemo-organotrophs, as they use organic compound as a source of energy and not require sunlight to grow.

Nutritional Yeast is a highly nutritious Vegetarian food with various potential health benefits. It Can be used as an extra protein, Vitamin, mineral and antioxidants to feed. Yeast may help protect against oxidative damage and boost immunity.

Benefits

- High Strength activated yeast .
- Colonizes well in the shrimp gut along with lactic acid bacillus.
- Prevents and Controls Pathogenic bacteria.
- Enhances plankton levels in the pond bottom
- Better digestion and absorption of nutrients

Composition /

saccharomyces cerevisiae 4 Billion cfu/ gr

Dosage

 10gms/ kg of feed or 100 gms of bio yeast fermented along with 10 kg of rice bran and 2 kg of Jaggery Presentation

500gms Pack
