

ORGAMIN-VF

Description

Chelated Minerals play a crucial role in the ecosystem when it comes to Aquaculture. Several universities have reported significant improvements to the animal health when chelated minerals were added to the feed at optimum proportions.

Organic minerals present in Orgamin-VF are absorbed into the gut Effectively because they are non-specific amino acid chelates, unlike inorganic minerals they do not require a carrier molecule to cross the intestinal epithelium, they are carried along with amino acid molecule. By combining various chelated minerals at right proportions Orgamin -VF provides a comprehensive organic mineral solution for shrimp nutrition.

Benefits

- Orgamin-VF enhances tissue protein synthesis leading to improvements in weight gain and lowers feed conversion ratio.
- Orgamin-VF improves the survival rate, due to its ability to boost immune enzyme response and also increases mucosal and shell strength
- Orgamin -VF provides trace minerals that are important in shrimp nutrition

Composition

- Chelated minerals

Dosage

- 10 gm/kg of feed, two meals a day

Presentation

1 kg Pack
